

Dear Hiring Manager,

I am writing to express my interest in the Custom Software Engineering Lead position at Accenture. With 5 years of experience as a Full-Stack Developer specialising in React.Js, I have consistently taken ownership of architecture decisions, performance standards, and cross-team consistency — experience I'm eager to bring into a role with broader technical leadership scope.

At Tata Consultancy Services, I have architected and delivered 30+ enterprise-grade insurance modules using React.Js, Next.Js, and a modern MERN stack, supporting 6,000–7,000 transactions weekly in a high-stakes Banking and Insurance environment. Beyond individual delivery, I have driven standards that scaled across teams — designing a centralised JWT authentication service adopted across 15 internal applications, and building a library of 15–20 reusable React components that standardised UI patterns for multiple project teams. This kind of standard-setting and cross-team influence is exactly the foundation I'd bring to owning technical direction at Capgemini.

I have hands-on depth in the core technical areas this role calls for: component-based architecture and state management (Redux Toolkit, Context API), front-end performance optimisation (a consistent 40–50% improvement track record through code splitting, lazy loading, and memoization), modern JavaScript and asynchronous programming patterns, and integrating React applications with REST/GraphQL backend services. I also bring testing discipline (Jest) and a habit of debugging and maintaining complex, form-heavy interfaces — including a 500+ user Underwriting module with deeply nested, performance-sensitive component trees.

I'm particularly drawn to this role's emphasis on setting development standards and driving continuous improvement — both areas where I've already been operating informally within my current team, and where I'm ready to take on more formal ownership. I would welcome the opportunity to discuss how my technical background and collaborative approach could contribute to Accenture's engineering teams.

Thank you for considering my application. I look forward to the possibility of speaking further.

Sincerely,

Sreyashee Roy
